

WANTED

INVASIVE AMERICAN BULLFROG

If you have seen or heard bullfrogs in Ninepipe Reservoir, or elsewhere in the Mission Valley, please report sightings. Your information is important to us!

Identifying Characteristics

- Bullfrogs are 4-6 inches in body length as adults, much larger than any native amphibian.
- Their tympanum (eardrum) is as large or larger than their eye.

Threat to Native Species

Bullfrogs will eat anything that fits in their large mouths; including birds, snakes, turtles, fish, and other amphibian species. Their voracious appetite has contributed to population declines of several native amphibian species.

Northern Leopard Frog

Columbia Spotted Frog

Sierran Treefrog

Western Toad
